

# CAMPUSCARE – AI-POWERED STUDENT SUPPORT PLATFORM

## Project Proposal

### 1. PROJECT OVERVIEW

CampusCare is a web-based platform designed to provide students with a centralized system for accessing campus support services, raising support requests, tracking request status, and receiving AI-assisted guidance.

The platform aims to reduce delays in handling student support requests by bringing frequently used services into a single digital platform.

### 2. PROJECT OBJECTIVES

1. Provide students with a centralized portal for submitting and tracking support requests.
2. Allow administrators to manage, assign, and monitor student requests.
3. Provide an AI-assisted FAQ and guidance feature for common student queries.
4. Provide dashboards showing request volume, status, and resolution trends.
5. Maintain secure storage of student requests and administrative information.

### 3. PROJECT SCOPE

#### IN SCOPE:

- Student registration and authentication
- Student profile management
- Support request creation
- Support request status tracking
- Administrator dashboard
- Request assignment and status management
- AI-assisted FAQ and guidance
- Email notifications
- Basic analytics dashboard
- PostgreSQL database
- REST API backend
- Responsive web interface

#### OUT OF SCOPE:

- Mobile application
- Payment processing
- Integration with external university ERP systems
- Voice-based AI assistant
- Automated decision-making for sensitive student cases

### 4. MAJOR DELIVERABLES

#### Deliverable 1 – Authentication and Student Management

The system will provide secure registration, login, logout, and student profile management.

#### Deliverable 2 – Support Request Management

Students will be able to create requests, attach descriptions, view request status, and track previous requests.

#### Deliverable 3 – Administrator Dashboard

Administrators will be able to view incoming requests, assign requests to support staff, update status, and monitor pending requests.

#### Deliverable 4 – AI Assistance Module

The system will provide AI-generated responses for frequently asked questions and guide students toward relevant support services.

## Deliverable 5 – Analytics Dashboard

The system will provide basic statistics on request volume, categories, resolution status, and response time.

### 5. PROJECT TIMELINE

Project Duration: 8 weeks

Week 1–2: Requirements analysis, database design, UI wireframes

Week 3–4: Authentication, student management, and support-request APIs

Week 5: Administrator dashboard and request assignment

Week 6: AI assistance module and integration

Week 7: Analytics, testing, and security validation

Week 8: Bug fixing, final testing, documentation, and deployment

### 6. TEAM RESPONSIBILITIES

Aarav – Backend Development: REST APIs, authentication, database integration, and backend services.

Meera – Frontend Development: student interface, administrator dashboard, and responsive UI.

Rohan – AI Integration: AI assistance, prompt design, API integration, and response validation.

Nisha – Testing and Documentation: test cases, bug tracking, documentation, and final validation.

### 7. MAJOR TECHNOLOGIES

Frontend: React.js

Backend: Spring Boot

Database: PostgreSQL

AI Service: Cloud-based LLM API

Deployment: Cloud hosting platform

### 8. KEY DEPENDENCIES

1. Backend development depends on completion of the database schema.

2. Frontend integration depends on availability of stable REST APIs.

3. AI integration depends on availability of the cloud LLM API.

4. Analytics depends on sufficient request data being available.

5. Deployment depends on completion of security testing.

### 9. SUCCESS CRITERIA

- Students can successfully create and track support requests.
- Administrators can manage and assign requests.
- AI assistance can answer supported FAQ queries.
- The dashboard displays request statistics.
- Critical security issues identified during testing are resolved.
- The application can be deployed successfully.

### 10. EXPECTED OUTCOME

CampusCare will provide a centralized project-support platform that reduces manual handling of routine student requests and provides administrators with better visibility into request status and workload.
